

# Field Crops

photo by Ed Williams/San Joaquin Co.

California field crops experienced less than ideal weather in 2005. Many crops were damaged by excessive amounts of rain in the spring and heat waves in the summer. Beans and hay experienced slight increases in value, whereas oats and wheat values were considerably lower than 2004.

California is the leading state in alfalfa hay production and consumption. In 2005, California produced 6.9 million tons of alfalfa hay, generating \$952.2 million, the highest value among all Golden State field crops. A series of storms brought heavy rains to California during the fall planting season. Some areas recorded record high March precipitation. Rainfall not only delayed planting and harvesting activities, but also potentially lowered alfalfa hay quality. Production dropped 6 percent from 2004, but the 17 percent price per ton increase made up the loss in production and pushed a 9.8 percent increase in production value. Other hay recorded a slight increase in yield and price, and values increased 11 percent to \$198.4 million.

Snowfall in the Sierra Nevada provided sufficient irrigation water for crops. However, heavy rains and below normal soil temperatures delayed cotton planting through early May. As warm and dry weather returned later in May, crop planting progressed more rapidly. By mid-June, crop condition was rated 53 percent good-to-

excellent, 45 percent fair, and only 2 percent rated poorly. Price of Upland cotton was \$0.60 per pound, up 16 percent from 2004, but 19 percent lower than 2003. Planted acreage significantly decreased 23 percent. The production decline caused the total value of Upland cotton to drop to \$306.7 million from \$443.3 million in 2004 and \$534.6 million in 2003. California growers planted 229,000 acres of American Pima cotton, up 15,000 from 2004. The price of American Pima cotton also increased 35 percent to \$1.19 per pound, generating \$318.7 million.

Rice is one of the major field crops in California with 528,000 acres planted in 2005. Medium-grain rice contributed about 90 percent of the total rice production and acreage. Rice planting was pushed back a week behind normal due to rainfall. Both long-grain and short-grain rice experienced lower yields, but slightly higher production. Medium-grain rice had 465,000 acres successfully planted. Along with a 14 percent decline in yield, medium-grain rice production decreased 26 percent to slightly less than 35,000 thousand hundredweight (cwt). Due to supply deficiencies, the overall price jumped 43 percent from 2004, pushing an increase in production value.

It was a good year for dry edible bean production. All major beans, except blackeye, leapt in production. Lima beans increased 29 percent from 2004. Chickpeas almost doubled its production. All dry beans generated \$56 million in value, up 32 percent from 2004, the second highest percentage increase among major field crops. Despite the good signs in 2005, there has been a declining trend in overall bean production.

Wheat production took a heavy hit from the unstable weather in 2005. A total of 570,000 acres was planted and 369,000 were harvested; both numbers are the lowest in the past 10 years. Overall, production declined 22 percent and value dropped 23 percent. Winter wheat declined in acreage and yield but increased in price, leaving total production value down 21 percent from 2004. Durum wheat production was down 27 percent to 196,650 tons. Price of durum wheat did not increase because of lower supply; on the contrary, it declined 8 percent. As a result, value was slashed 33 percent from 2004.

Sweet potatoes generated \$103.5 million of value, a 29 percent increase from 2004.

***Notable Increases in Value:***

Beans, All Dry Edible .....	32%
Corn for Silage .....	22%
Hay, All .....	10%
Potatoes, Sweet.....	29%
Rice, All .....	9%

***Significant Decreases in Value:***

Corn for Grain .....	25%
Cottonseed.....	37%
Oats.....	54%
Wheat, All.....	23%

## Field Crop Acreage, Production and Value, 1996–2005

2005	570,000	369,000	2.29	844,650	124.67	104,458	

<sup>1</sup> Area planted includes preceding fall.

<sup>2</sup> Production is on a clean basis.

<sup>3</sup> Missing data has not been published due to the estimate being discontinued, not estimated, or not available.

<sup>4</sup> Includes varieties not listed separately. Excludes beans grown for garden seed.

<sup>5</sup> Planted acreage is for all purposes.

<sup>6</sup> Cotton bales are 480 lbs. net-weight.

<sup>7</sup> Estimates began in 2005.

<sup>8</sup> All alfalfa forage production is the sum of alfalfa harvested as dry hay and alfalfa haylage and greenchop production after converting it to a dry equivalent basis.

<sup>9</sup> All forage production is the sum of the following dry equivalents: alfalfa hay and all other hay harvested as dry hay, alfalfa haylage and greenchop, all other hay haylage and greenchop; after converting alfalfa and all other haylage and greenchop to a dry equivalent basis.

<sup>10</sup> Estimated marketings of alfalfa and other hay used as weights to calculate all hay price for 1996–2005.

<sup>11</sup> Includes only alfalfa and alfalfa mixtures that were harvested as haylage or greenchop (green weight). Alfalfa harvested as dry hay is not included.

<sup>12</sup> Includes all types of forage harvested as haylage or greenchop (green weight). Forage harvested as dry hay and corn and sorghum silage/greenchop are not included.

<sup>13</sup> Sweet rice acreage has been included since the 2003 crop year, but not previous years.

<sup>14</sup> Excludes wild rice.

<sup>15</sup> Estimates began in 2000.

<sup>16</sup> Relates to year of intended harvest for fall planted beets in central California and to year of planting for overwintered beets in central and Southern California.

## Floriculture

The U.S. value of floriculture crops rose 1 percent in 2005 for a total of \$5.36 billion. Floriculture crops include bedding plants, flowering plants, foliage plants, cut cultivated greens and cut flowers.

California led the nation in floriculture sales with \$1.02 billion and was the only state to exceed \$1 billion. The runner-up, Florida, had a wholesale value of \$976 million in 2005. However, the number of growers in California in 2005 was 820, as compared with 907 in Florida. California and Florida accounted for 37 percent of the 36-state total value. The top five states (California, Florida, Michigan, Texas and New York) accounted for 53 percent of the total value.

According to the USDA Economic Research Service, total domestic use of floriculture crops was \$6.17 billion in 2005; of that figure, floriculture imports accounted for 14.1 percent. This means that, on average, \$56 of wholesale floriculture crops were sold to each U.S. household.

Imported floriculture crops were fierce competitors for U.S. producers. All domestic floriculture crops had increased sales, except for cut flowers, which suffered most from foreign competition. California led the country with 73 percent of total cut flower sales in 2005. Of the more than \$1 billion in domestic sales of cut flowers nationwide, \$709 million were from imports. Roses

accounted for about 40 percent of imported cut flowers at a value of \$274.7 million. Of cut roses, a new record of 88 percent was attributed to imports.

The number of U.S. cut flower producers has fallen the past two decades as cheaper imports made their way into the market. Average annual sales of cut flower growers, however, have steadily increased. This can be attributed to fewer growers putting more effort into growing high-value cut flowers. Consequently, cut flower sales per grower have experienced an upward trend.

Nationally, sales of potted flowering plants grew a modest 1 percent to about \$809 million in 2005. California led the nation in sales of potted flowering plants in 2005 with a value of \$199.3 million. This was 25 percent of total U.S. value and more than twice Florida's sales of \$94.6 million.

Poinsettias, orchids and florist chrysanthemums remained the top sellers, though a survey of the largest producers showed that sales for poinsettias were down 2 percent from 2004. Orchids were the fastest growing in terms of sales of all potted flowering plants, more than tripling sales of a decade ago. Chrysanthemum sales also increased from 2004. California also grew the most poinsettias and orchids, with poinsettias averaging \$4.10 per pot and orchids averaging \$8 per pot nationwide.
